

Cure.fit is a B2C health-tech startup headquartered in Bengaluru, aiming to make a healthy lifestyle affordable and accessible for its customers by leveraging technology and data analysis. Founded in the year 2016 by Flipkart mafias- **Mukesh Bansal & Ankit Nagori**, Cure.fit has been on an uphill journey ever since it's inception to become the hydra of holistic health in India and slowly step out to the global startup ecosystem as well.

Today, Cure.fit stands at about 3 million paying subscribers and has raised approximately \$400 million in the year 2020 alone. Back in 2016, when Mukesh and Ankit were in search of funding for their cutting edge idea, investors were convinced that the company would grow in three phases; an initial round of acquiring and building independent verticals, secondly presenting Cure.fit as behemoth healthcare "super app" and finally emerging as a dominant player in the Healthcare space. The company now stands at the transition point between phase 2 and phase 3. It has successfully established itself in the Indian ecosystem and has ventured into the US market, initially offering free digital services.

Cure.fit raised a \$15 million series A funding from **IDG Ventures, Accel Partner, and Kalaari Capital** in 2016, and this has followed nine rounds of funding worth \$500 million since then, with major investing entities being giants like **Chiratae Ventures, Trifecta Capital, Axis Bank, and HDFC Bank** to name a few. The company recently raised \$110 million in its series D funding round from Temasek Holdings, Accel, and Epiq Capital in march 2020. As a cherry on the top, **Tata Digital** has agreed to invest \$75 million in the startup as well.

The venture initially composed of three verticals - **Cult.fit**; a membership-based service consisting of a chain of gyms all over the country, **Eat.fit**; a subscription-based food delivery vertical promising nutrition-rich food catered from its cloud kitchens, and **Mind.fit**; a mental wellness app. Two new verticals have eventually been added, namely Care.fit; a primary healthcare application with tele-consultation as a recent addition, and Cult sport; a fitness clothing vertical.

Although the Covid pandemic led to an elimination of 1400 jobs with 10% of the physical cult.fit centers being shut down, the digital era saw a phenomenal upsurge in the number of users who availed of online fitness lessons and Yoga classes. The product which was limited to tier 1 cities now found its way to tier 2 and tier 3 cities as well, hence opening doors to a wide array of growth opportunities for Cure.fit.

The growing number of diet-conscious individuals with a combined effect of the Covid-19 pandemic has led to a boost in the growth of Eat.fit, which has witnessed a 2x increase in its revenue contribution. Standing 30%, Eat.fit is expected to surpass cult.fit in the coming years. And although Eat.fit faces high neck competition from hyperlocal delivery companies like Swiggy and Zomato, Cure.fit wants to enter the market as a "clean label", delivering food products with no added preservatives, no sugar, and no additives. Apart from Eat.fit, Cure.fit also plans to expand its own healthy packaged food brand collection - **whole.fit**, its end goal being a transition from clean labels to protein-rich snacks to organic food.

The company entered into an equity partnership with **HRX**- Hrithik Roshan's fitness apparel brand in 2018 with an intent of Cult Sport's growth. A similar partnership was forged with **Zomato** and **PhonePe** in 2019 enhance the operations of Eat.fit. To grow it's customer base in India and the US, Curefit acquired fitness facilities aggregator **Fitternity** and California-based fitness company **Onyx** in June 2021 and January 2021 respectively. In all, the company has seen 8 acquisitions so far since 2016.

With a current valuation of **\$815 million** and being the Indian Healthcare market leader, Cure.fit aims to establish roots in all the verticals of health tech and provide a premium club like experience to its customers at affordable prices to eventually grow into a global mega corporation.
